Kab. Bandung, Prov. Jawa Barat

Hello! I am Fahmi Nursafaat, a Computer Engineering student at Universitas Pendidikan Indonesia Bandung, passionate about information technology and the development of Internet of Things (IoT) applications. As an enthusiastic advocate for cybersecurity, I continuously study digital security aspects. Proficient in programming languages such as C++, HTML, CSS, Java, PHP, and JavaScript, I focus on creating innovative technology solutions and integrated software. I am committed to delivering high-quality services and fostering partnerships with clients who prioritize quality and professionalism.

Education Level

Universitas Pendidikan Indonesia Cibiru - **Bandung, Indonesia** Sep 2022 - Jan 2026 (Expected)

Undergraduate in Computer Engineering, GPA: *3.83/4.00*

Experiences & Projects

AcneSense Web App [link] May 2025 – June 2025

AcneSense is an innovative AI-driven acne detection and classification system, meticulously crafted to offer early screening solutions for acne conditions through a cutting-edge Progressive Web App (PWA) platform. This dynamic system comprises two main components: an intuitive progressive web application and a powerful model API. In this project, I took on the dual role of Front-End and Back-End Developer utilizing Node.js, with the following details:

- **PWA Development**: Built the application using Express.js as the backend framework, and utilized EJS, Vite, and Tailwind CSS for the frontend. Supabase was used as the relational database to store user data and diagnosis history.
- **Innovative Features**: Developed personalized acne diagnosis features that allow users to receive accurate analyses of their skin conditions. This includes a diagnosis history feature for tracking changes in skin conditions over time, as well as a chatbot for providing informative Q&A regarding acne and the application.
- **Hosting and Deployment**: Deployed the PWA in a Docker container that is separate from the API to Google Cloud Run, ensuring optimal performance and scalability of the system.

SkinSenseAI Mobile App [link] September 2024 – October 2024

This comprehensive AI healthcare project was specifically developed for the ITConvert software development competition at Universitas Jember, where it competed against teams from multiple universities nationwide. The innovative integration of YOLOv8-based medical image analysis and RAG-powered conversational AI successfully secured third place in the software development category, demonstrating technical excellence and practical innovation in applying machine learning to healthcare applications.

In this project, I was responsible for working on the **backend and frontend using Flutter**, ensuring that the application runs smoothly and responsively.

Eunoia Mental Health Web App [link] August 2024 – September 2024

This AI-powered mental health application was specifically developed for the ITConvert software development competition at Universitas Jember, where it competed against numerous university teams nationwide. The solution's innovative dual LSTM architecture for diary-based mood analysis and forum-based suicide risk detection successfully secured second place in the software development category, highlighting both technical innovation and a meaningful contribution to advancing mental health technology.

In this project, I worked on the **backend and frontend using Laravel**, ensuring a robust and responsive application.

ImagePicker: Cyber Security Tools [link] November 2024 – December 2024

Created a Flask-based website for image steganography, focusing on secure image upload and processing systems. Developed user-friendly web interfaces for both encryption and decryption, enhancing the security of digital images.

Helios Tracker Web [link] November 2024 – December 2024

Engineered a full-stack web application featuring responsive design and real-time data visualization, supported by a robust Laravel backend. Managed user accounts and integrated IoT APIs to provide comprehensive tracking capabilities.

Helios Tracker Mobile [link] November 2024 – December 2024

Developed a full-stack mobile application using Flutter with a responsive design. Included real-time data visualization and a powerful Laravel backend, focusing on user management and seamless IoT API integration.

Moju (Mood Journal) [link] October 2024 – November 2024

Created a web application for mood management using PHP , utilizing AI for emotional analysis. Integrated a user-friendly content management system and discussion forum to foster user interaction and support.

Nusantara Zoo Web App [link] June 2024 - August 2024

Developed an educational web application about zoo animals using Laravel, working as a full-stack developer to incorporate Augmented Reality (AR) for interactive 3D models accessible via mobile devices, enhancing user engagement in learning about wildlife.

Syncronus Chat Realtime Web App [link] June 2025 - July 2025

Syncronus Chat Realtime is an innovative chat application designed to provide an instant and efficient communication experience. Created as a full-stack project, I worked on this application from both the frontend and backend perspectives.

- **Frontend**: Built using **React**, this application offers a responsive and intuitive user interface, ensuring a smooth and enjoyable chatting experience. Users can easily interact, send messages, and share information in real-time.
- **Backend**: Utilizing **Express.js** as the backend framework, the application is equipped with a robust and efficient API, allowing for quick and reliable data management. With the support of **MongoDB** as the database, user data and messages are stored securely and can be accessed swiftly.

Awards & Honors

- **2nd** Place **IT Convert National Software Development Competition** 2024 at Jember University. [link]
- **3rd** Place **AI-NOVAC National Artificial Intelligence Innovation Competition** 2024 at Institut Teknologi Sumatera. [link]
- **Achievement in Academic and Non-Academic Excellence** 2025 at Universitas Pendidikan Indonesia. [link]

Certifications & Courses

- **Alibaba Cloud Certification:** Certified Developer Generative AI, ACA Cloud Computing Certification, Alibaba Cloud Certified Developers – 1. [link]
- **Dicoding:** Learning Cloud Basics and Gen AI on AWS, Learning Beginner Back-End with JavaScript, Learning Git Basics with GitHub, Learning JavaScript Programming Basics, Learning Web Programming Basics, Learning Front-End Web Development Fundamentals, Learning to Create Front-End Web for Beginners, Learning Intermediate Web Development, Introduction to Programming Logic (Programming Logic 101), Getting Started with Programming Basics to Become a Software Developer**.** [link]
- **Built With Angga:** Progressive Web Apps (PWA) . [link]
- **Kompetegram:** Completed A Node.Js Bootcamp. [link]
- **Codepolitan:** Learning Basic HTML**,** Learning Basic CSS, Learning Bootstrap CSS Framework**.** [link]

Organisational Experience

Staff | Dies Natalis Teknik Komputer [link] 1 Jun 2024 – 8 Jun 2024

As a staff member in the design and decoration division for the Dies Natalis of the Computer Engineering event, I design and implement engaging visual concepts. My tasks include brainstorming, color selection, and space arrangement to create a festive atmosphere. I also collaborate with other teams to ensure the coherence of decoration elements and am involved in the preparation of materials.

Skills and Interests

- **Soft Skills**: Able to communicate verbally and non-verbally, work in a team, adapt quickly, think creatively, work analytically, solve problems, take initiative, be open-minded and take responsibility for situations
- **Hard Skills**: C/C++, HTML, CSS, JavaScript, Node.js, Java, Php, MySQL, Express, Laravel, Firebase, Supabase.
- **Interest**: Cyber Security, Mobile development, Web Development.
